# AjoChain!

Rotating savings circles,
enforced by Bitcoin Cash

https://github.com/Afar88/Ajochain

# The Story of AjoChain

Millions of Nigerians save through Ajo: each week everyone chips in and one member takes the whole pot.

But a human treasurer holds the cash, and if they vanish, everyone loses. AjoChain replaces the treasurer with a Bitcoin Cash covenant.

# Benefits of AjoChain

- No treasurer holds the money
  - A covenant guards it
- Each pot only pays the member whose turn it is
- Every round is on-chain
  - Anyone can verify it
  - Fees: fractions of a cent

# BCH Usage

Each circle is a BCH covenant holding the pot. A CashTokens NFT counts the rounds, so the contract only pays the member whose turn it is.

```
pragma cashscript ^0.14.0;

contract AjoCircle(bytes20 m0, bytes20 m1, ..., int memberCount, int contribution, bytes32 stateCategory) {
    function payout() {
        // Round counter lives in a CashTokens NFT
        int round = int(tx.inputs[0].nftCommitment);
        require(round < memberCount, "circle already completed");
        require(available >= memberCount * contribution, "pot not full yet");
        require(tx.outputs[0].nftCommitment == toPaddedBytes(round + 1, 1), "round must increment by one");

        bytes20 recipient = m0;
        if (round == 1) { recipient = m1; }   // ... up to m4
        require(tx.outputs[1].lockingBytecode == new LockingBytecodeP2PKH(recipient),
                "pot must go to this round's member");
    }
}
```

# The Vision

- Dollar-stable circles with PUSD
  - Savings don't swing with the BCH price
- Mobile-first for market traders and families
  - Join with any WizardConnect wallet
- Model: a tiny fee per completed circle
